

# Black Mat FC<sup>®</sup>

*Black Mat FC<sup>®</sup> is an asphalt pavement surface treatment specifically designed for placement in-between the lane lines to restore high surface friction while preserving the drive lane quality. By going in-between the lane lines, this process eliminates the cost of restriping, removal and reinstallation of the raised pavement markers.*

## Features

- Durable aggregate provides excellent friction numbers
- Long lasting dark surface minimizes use of salt in winter months
- Thin application does not impede flow of water from pavement
- Rapid product application minimizes traffic delays
- Exacting product quality control yields consistent uniform surface

## Benefits

- Extends the life of pavements with insufficient skid numbers
- Dark surface helps to quickly melt snow and ice
- Helps reduce future maintenance repairs and costs
- Helps decrease motoring accidents related to polished pavements
- Corrects friction issues without fracturing pavement like Micro Milling

## Applications

- County or State Highways – Mainlines
- County or State Highways – Entrance and Exit Ramps
- Steep Hills and Sharp Turns
- State and Metro Parks

## Common Uses

- DOT highways needing to correct surface friction issues
- Steep inclined roads with a history of skidding problems
- Mainline city streets with issues involving stop and start traffic
- Cost effective solution compared to Micro Milling ramps
